

## ENTRY SYSTEMS

Include sliding or swinging doors, as well as stacking or bi-fold panels. Any one of our trained staff can assist you with your project, from choosing hardware such as pivots, rails and patches to hole placement, weight bearing supports and decorative hardware. We follow all tempering regulations, glass thickness, hole and hardware placement specifications to ensure a quality product that will last long and look great. Knowing safety standards is just one of the many benefits to working with CUDA architectural glass. We can help you design and develop a system that will be ready to install and fit the character of your application. Our in-house engineers will consult, work with and for you during your order. Since no two orders are alike we pay close attention to the detail, making your project an individual piece of architecture. We can walk through the process with those who are looking for a professional opinion or simply listen and produce exactly what the client wants.

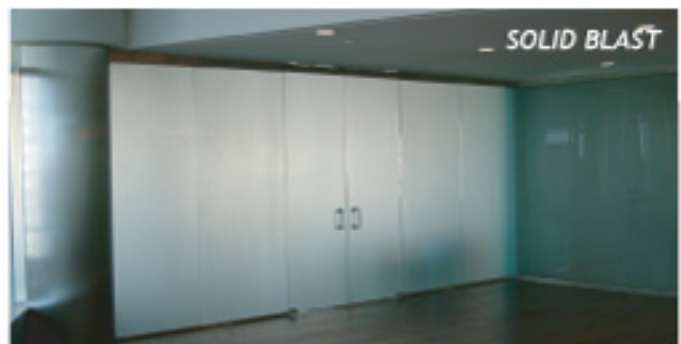

*Glass entry system with sidelight and custom logo sand shaded and centered on two doors.
