

LIGHTING

Lighting systems in today's offices & homes use a variety of devices which integrate many different lighting applications to minimize energy usage and maximize aesthetics. These architectural accents are also functional for lighting levels and diffusion.

The blast application diffuses the light and creates a softer even tone that is more pleasing to the human eye.

Solid blast on the glass' second surface provides a smooth glossy look on the outside, allowing easy clean up as well as a clean look. Patterns, company logos, and any design can be added to the glass for a fully customized look.

Slumped Glass can be used for any lighting applications to achieve a spectacular lighting display that would be a showpiece for any office or home.
